SUMMARY

Full-stack developer with experience building web and mobile apps, from user interface to backend systems. I focus on writing clean code and building tools that help a business run better and grow. I stay committed to every project, from the first plan to the final launch. I enjoy learning new tools and applying them to solve real, practical problems.

EDUCATION

National University - Baliwag

Expected Graduation: 2027

Bachelor of Science in Information Technology with Specialization in Mobile and Web Application.

Honors: Dean's Lister Awardee | Seminars & Workshops: Google Developer Student Clubs (GDSC) Participant, AWS Cloud Seminars

PROJECTS WITH CLIENTS

Hair for Hope (*Shangri-La Mall, Shaw Boulevard*): Developed StrandShare (Capstone Project), a management system for handling hair donations, event requests, and available wigs. It includes AI-powered hair screening to help donors check if their hair meets donation requirements before attending an event, saving them time and unnecessary travel. It also offers a virtual wig try-on that lets mobile users preview how available donated wigs may look on them.

Angat Trading (*Motorcycle Retail Store*): Modernized traditional retail operations for motorcycle equipment owner Bienvenido Pedroso by engineering a custom POS and retail management system. Designed and implemented a unique "barter trading" module to accurately track and facilitate fair item-to-item exchanges.

E-Elyon Church (*San Rafael, Bulacan*): Built the EECM (E-Elyon Church Management System), centralizing administrative operations, data tracking, and internal communications between the main church and multiple branch locations.

TECHNICAL PROJECTS

FixItLocal — Solo Full-Stack Developer

- Developed a specialized infrastructure reporting website tailored strictly for a city in Bulacan, enabling users to report hazards such as broken streetlights, potholes, and blocked drains.
- Engineered an AI-driven photo upload feature that automatically analyzes and verifies the attached images of hazards in real-time.
- Implemented interactive map pinning, allowing users to drop precise geolocations so officials can efficiently track and resolve maintenance issues.

FlavorFlow — Solo Full-Stack Developer

- Engineered a centralized culinary management hub featuring a community inspiration dashboard and a personalized recipe storage system.
- Designed an interactive Weekly Planner that automatically parses selected meals to generate a Smart Grocery List.
- Implemented dynamic inventory tracking within the grocery list, allowing users to toggle pre-owned ingredients and check off items in real-time while shopping.

P2P Bus Ticketing & Reservation System — Backend Developer

- Built the backend infrastructure for a real-time Point-to-Point (P2P) bus transit platform.
- Programmed the seat reservation system to handle immediate ticket orders seamlessly and prevent double-booking.

Tiny Diver — Lead Game Developer

- Developed a 2D educational adventure game focused on ocean conservation, taking full ownership of level design, asset integration, and core mechanics.
- Programmed top-down gameplay and complex tilemaps from scratch utilizing the Godot Engine and GDScript.

Technical Mini-Projects — Solo Developer

- Designed and coded multiple practical applications, including a Point of Sale (POS) system, an Inventory Management tracker, and a Vending Machine simulation.
- Focused on refining backend architecture, database logic, and creating clean, user-friendly interfaces.

TECH STACK

Frontend & Mobile: React, React Native, Flutter (Dart), JavaScript, TypeScript, UI/UX Design

Backend & Languages: PHP, Java, Kotlin, Python, JavaScript

Databases & BaaS: MySQL, PostgreSQL, MongoDB, Supabase, Firebase

AI & Deployment: Local AI Model Deployment, ChatGPT, Gemini, Claude, GitHub Copilot

Game Development & Tools: Godot Engine, GDScript, VS Code, Git, GitHub, GitHub Desktop

CERTIFICATIONS & ACHIEVEMENTS

- Microsoft Learn Scholar: 44 completion badges and 11 trophies across Microsoft technologies.
- IT Specialist (ITS): Cybersecurity: Certiport, CertNexus & Pearson VUE (awarded June 2026)
- Java Certification: SoloLearn
